

**Let's build something
great together.**

Engineered solutions. Complete project delivery.

NEW BUILDINGS / EXTENSIONS / REFURBISHMENT

EXPLORE HSB

North East roots. Nationwide delivery.

Hamilton Steel Buildings designs, supplies and installs bespoke steel buildings for commercial, industrial and agricultural clients across the UK.

Established in 2017, our family-run business combines a personal point of contact with coordinated design, groundworks and construction.

ONE COORDINATED SERVICE

From the first brief to the completed building.

CANOPIES & COVERED SPACE

WORKSHOPS & STORAGE

INDUSTRIAL FACILITIES

Precision formed. Purpose designed.

GALVANISED PORTAL FRAME UNDER CONSTRUCTION

Cold-formed sections are shaped from steel strip at room temperature. C and Z profiles use their geometry to provide structural capacity with comparatively low self-weight.

Galvanised protection

A zinc coating provides corrosion protection. Suitability and coating requirements depend on the exposure environment.

Efficient off-site manufacture

Factory-formed components support consistent dimensions and planned site assembly.

The frame, bracing, connections and foundations must be designed together for the site and its loads.

The right frame. The right building.

Frame selection starts with the building's use, span, height, openings and loading requirements.

Engineered for its location

Wind, snow, imposed loads and ground conditions inform the structural and foundation design.

Cladding to suit the operation

Single-skin and insulated panel options allow the envelope to be matched to the intended use and thermal requirements.

Choose the appropriate system

Cold-rolled frames suit many workshops and storage buildings. Larger spans, heavy loads or cranes may require hot-rolled or hybrid solutions.

Detail the complete envelope

Doors, rooflights, gutters, flashings and fire boundary requirements are coordinated with the wider design.

From concept to completion.

- 01 Define the brief**
Use, dimensions, access, programme and budget.
- 02 Develop the design**
Drawings, structural input and approval requirements.
- 03 Prepare the site**
Agreed groundworks, foundations, slabs and drainage.
- 04 Construct & hand over**
Steel erection, cladding, doors and finishing works.

SIMPLY FOOD SOLUTIONS / EXTENSION

Planned safely. Managed professionally.

TEESWORKS / FRAME ERECTION & EDGE PROTECTION

Safety starts before site work.

Site conditions, construction sequence and access need to be considered together.

Leadership & competence

SMSTS-qualified Managing Director Chris Hamilton, supported by specialist health and safety advice.

Project-specific preparation

Risk assessments, method statements, COSHH assessments and construction phase plans establish the controls for the work.

Work at height

Plan to avoid height work where practicable, prevent falls and mitigate remaining risks. Safety netting complements fall prevention measures.

Different sites. Tailored solutions.

WREXHAM

FOOTBALL ASSOCIATION OF WALES

Cold-rolled mono-pitch maintenance store and workshop. Juniper Green single-skin cladding.

22.82m × 7m × 3m

INDUSTRIAL INFRASTRUCTURE

TEESWORKS LV BUILDING

Purpose-built accommodation for low-voltage equipment, with access for maintenance.

14.6m × 6.125m × 3.2m

COACH MAINTENANCE

STANLEY TRAVEL

Insulated cold-rolled maintenance building, with a large roller shutter opening to accommodate coaches.

18m × 9m × 6m

Build on what you already have.

JOHN CLARK VALVES / STEEL BUILDING EXTENSION

New buildings • Extensions • Re-cladding •
Groundworks • Drainage

Create additional space

Extensions, canopies and new openings can adapt existing premises to changing operational needs.

Renew the building envelope

Roof and wall refurbishment can update weather protection, appearance and insulation where specified.

Plan around the existing site

Surveys, interfaces and site access are considered before work starts. Any suspected asbestos requires assessment and an appropriate specialist approach.

Let's discuss your next project.
